

Science at Gorse Hill is practical, interactive, and memorable. It offers children practical activities to suit different learning styles, new experiences and helps them to question and understand the world around them. They make reasoned investigations and find out answers for themselves, questioning what they know and how. They explore possibilities through investigations testing their theories. Science at Gorse Hill is hands on, the children use observation, logic, and common sense to find answers and work scientifically.

Science is hands on and interactive

Science is practical

Science is led by us

We are engaged, interested and involved in practical investigations

Asking questions such as "What if?"

Science is memorable and interesting.
It has wow factor!

Science is well resourced
